

# Sage Construction EValuate

## Historical Project Analysis/Retrieval

Encouraging the cost analysis of projects and tenders submitted into a central format will standardize the information and share knowledge within an organisation. This standardised approach will allow the development of a benchmarking process to check a project's developing costs between stages or milestones as required.

Each analysis begins with a series of key project information detailing client, consultants, building sector and work type etc; Once created each project is assigned a series of attributes to enable consistent analysis: total values, cost date, index, site area and building girth. Analysis information is entered for each appropriate trade package and element; product specification details; total package cost and date. Further detailed analysis information may be gathered as bespoke unit quantity cost information for each project.

### Headline Functions

- Archive validation process ensures quality of data is maintained
- An Excel based template is available to import data currently stored in any existing databases

- Elements and trade packages maintain the same attributes
- Information retrieval search by any combination of the compulsory project criteria
- Retrieve all information at archived value, current value and forecast value
- Benchmark project totals only, or with associated elements/trade package breakdowns
- Benchmark individual elements/ trade packages to create trend analysis reporting

### Sage Construction People making the software work for you

Sage Construction are the people, the enablers who develop, deliver and implement successful pre & post contract solutions. Industry experienced personnel who seek to understand your requirements fully, listen to your questions, and understand where you want to go. Put simply, we develop, configure, train and support the ongoing operation of the software to meet the needs of your business. Our aim is

to help you realise return on investment quickly, and over time, ensure our systems support your evolving needs.

Sage Construction uses collaborative methods and an open approach to working with you and your other business systems providers to ensure integration is never an issue. We have a number of proven interfaces to a number of the industries leading 'back-office' system vendors to contract costing, procurement and financial modules.

### The EValuate tool set

EValuate is the tool that facilitates the core processes of work winning and work doing. From single line budget to fully resourced standard method bill, budget cost to post contract variation. EValuate is the working engine and corporate archive that holds and controls the key metrics used to support your decisions about describing, quantifying and valuing your work. EValuate is the system that assists you to manage your project and company risk. EValuate is the estimating and surveying workbench, the practical tool that converts brief to outturn and beyond.
